"Werner von Siemens (1816-92) is best known in the English-speaking world as an inventor and pioneering electrical engineer. While previous studies have concentrated on his work as a scientist and technician, this biography, the first in a three-volume history of the Siemens corporation, focuses on his life as a businessman. Siemens was not only a successful inventor but also an entrepreneur with a broad and international business vision." "Siemens first achieved success in telegraphy. His firm, Siemens & Halske, built Germany's first important telegraph line and went on to build lines elsewhere in Europe and Asia. Siemens then turned

his hand to electric technology. He was instrumental in creating the conditions for the advancement of electrical technology from the experimental stage into the modern electrical industry." "Siemens combined his engineering brilliance with entrepreneurial skills to develop a business whose activities at an early stage nearly spanned the globe. Siemens held a multinational vision almost from the start. The Siemens firms were unique in that, rather than starting small then slowly growing and branching out, they were from their inception international organizations." "The story of Siemens is a vital part of the history of industrialization in Europe. It will make fascinating reading for scholars and students of German history, business history, and the history of technology."--BOOK JACKET.Title

This book examines the changing business and economic environment for postal services in Lithuania and the upcoming challenges for this industry. Postal services continue to play a central part in the development of national economies. However, the economic and social role of postal services has changed rapidly and fundamentally over the last two decades. In most industrialized countries, paper-based communications are in serious decline, while the demand for parcel delivery services is rising steadily with the continuing development of e-commerce, just-in-time production techniques, and global supply chains. For the postal sector as a whole, the centre of gravity has shifted dramatically from letters and documents to parcels. The authors explain how the organizational paradigm has inexorably shifted from that of a national, government-owned postal administration providing the basic delivery services required by society, to a system of interdependent local and regional undertakings that both compete and cooperate with one another. The book argues that there are no indications that the postal

sector has stopped changing, and that it seems most probable that the European Union's postal sector will look quite different in 2035 than it does today. In closing, the book explains how the shareholders of postal services companies have recently confirmed that the time has come to rethink the strategy of creating and maintaining competitiveness in the postal services industry.
